

G700 GUARD TOUR

Overview and Description

G700 Reader

RHS-G700 is our new RFID guard patrol system. It is metal body and moulded rubber shell. It can auto-read signal cards without key pressing and no any downloader required when uploading patrol records to PC. What we need is just a USB port cable. The biggest benefit is that it is no any key on surface of the reader, which is a totally water-proof, super anti-strike design.

RHS-G700 works with the popular RFID format signal cards, which are low in cost and have been widely used in systems including time and attendance, access control system, parking management and etc. The readers have been used in guard tour systems as well as other applications including time and attendance, vehicle management, animal identification, parts management and etc.

The Feathers:

- Reading cards **without key press**;
- Sabotage absorbent;
- Completely waterproof;
- Resistant to electrical shock;
- Transmit data to computer **via a USB cable directly**;
- Low battery consumption (CR123A);
- Battery can be changed by users.
